Crude Fat	Min.	3.0%
Crude Fibre	Max.	1.0%

INGREDIENTS

Dairy Powders, HWG, Added Amino Acids, Vitamin-Mineral-Additive Premix, Botanical Extracts, Natural and Artificial Flavours.

DIRECTIONS FOR USE

Cows-R-Us FUSION is designed to allow calves to reach their natural lean growth potential. **Cows-R-Us FUSION whole milk supplement**, in conjunction with milk, provides ample nutrients to avoid energy deficits in calves, while increasing dry feed intakes and supplying protein needs for the most efficient growth. Calves in all calving systems need, ideally, to enter the herd by 22 to 24 months of age with appropriate weight and stature. This product, in conjunction with well designed calf and heifer diets, will let them achieve these goals cost-effectively.

Mix 225 grams of **Cows-R-Us FUSION** powder with 3 Litres of warm milk (40°C or body temperature) per calf daily.

The 225 grams of **Cows-R-Us FUSION** powder can first be mixed with 2 Litres of warm (40°C or body temperature), clean water and be combined with the 3 Litres of milk to provide 5 Litres of liquid feed daily.

(Tip – Use a scale to accurately measure powder.)
